5 WAYS TO MAKE FEEDBACK EASIER

Smart tools. Less typing. Better feedback.

1 CREATE A FEEDBACK AGENT USING COPILOT

This is probably the biggest workload saver.

Create an agent that includes:

- Qualification
- Assessment criteria
- Quality standards
- Feedback structure

All you need is a good prompt and any resources to upload such as the unit specification.

Tutors simply type or voice speak into Copilot (use the speaker icon):

"Student completed brake inspection. Met P1 and P2. Need to improve written explanation."

The agent then generates:

- Positive feedback
- Criteria-linked comments
- Developmental targets
- Standardised language

BENEFITS

- Consistency across the department
- Supports IQA requirements
- Saves time
- Reduces variation between tutors

2 VOICE-TO-TEXT FEEDBACK

Many tutors can speak faster than they type.

Using Copilot:

1. Open Copilot.
2. Select microphone.
3. Speak feedback naturally.
4. Copilot converts it to text.
5. Ask:

"Rewrite this feedback using the 3C feedback model and link it to assessment criteria."

This is particularly useful in workshops, garages and practical environments.

3 UNIT FEEDBACK TEMPLATES

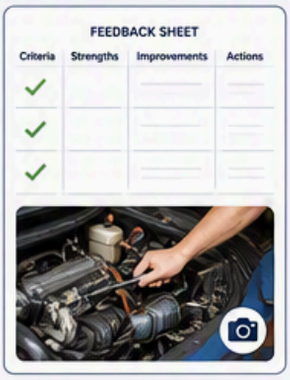

Use Copilot to generate criterion-specific feedback sheets.

Prompt example:

Create a learner feedback sheet for Level 2 Motor Vehicle Unit 5. Include criteria, strengths, improvements and actions.

Tutors can then:

- Tick criteria achieved
- Add voice-recorded comments or manual written
- Insert photos of practical work
- Build evidence quickly

4 MICROSOFT TEAMS ASSIGNMENTS

Many tutors don't realise how powerful this is.

Benefits include:

Built-in Feedback Area

- Written comments
- Rubrics
- Marking criteria

AI-Assisted Writing

Copilot can help expand brief comments into detailed feedback.

Voice Feedback

Tutors can use voice dictation within Teams.

This is often faster and more natural than typing.

Example:

Tutor types:

"Good practical skills but explain reasoning."

↓

AI expands this into:

"You demonstrated strong practical skills when completing the inspection task. To strengthen your evidence further, explain the reasoning behind your chosen diagnostic process and how it helped identify the fault."

5 CREATING VERBAL FEEDBACK USING WORD TRANSCRIBE AND COPILOT

Ideal for Construction, Engineering and Motor Vehicle tutors who spend large amounts of time assessing practical activities.

HOW IT WORKS

1. Open a Word document. (MS 365)
2. Select Dictate > Transcribe.
3. Speak your feedback as you observe.
4. Word converts your speech into text.
5. Copy transcript into Copilot.
6. Ask Copilot to structure using your model or agent.

Or against prompts

EXAMPLE PROMPT

"Rewrite this feedback using the 3C Feedback Model. Link comments to assessment criteria, make it professional, positive and developmental, and provide a clear action for the learner."

WHAT THE TUTOR SAYS

"The learner completed the brake inspection safely and followed the correct process. Measurements were accurate and all tools were used correctly. More explanation is needed regarding the causes of wear identified during the inspection."

COPILOT PRODUCES (3C EXAMPLE)

Commend: You completed the brake inspection safely and demonstrated good practical skills throughout. Measurements were accurate, and tools were selected and used correctly.

Criteria: This evidence meets P3 as you successfully carried out the inspection using appropriate procedures and safe working practices.

Challenge: To strengthen your evidence further, explain the causes of wear identified during the inspection and justify your findings to demonstrate deeper understanding.

BENEFITS

- Faster than typing
- Captures detailed observations while they are fresh
- Ideal for practical workshop environments
- Supports tutors who prefer speaking to writing
- Creates consistent written evidence for IQA and EQA
- Can easily be copied into Teams Assignments, OneFile, Smart Assessor or learner feedback forms

OTHER FORMS OF FEEDBACK THAT IMPROVE CONSISTENCY AND EVIDENCE

RUBRICS

One of the easiest ways to improve consistency.

Example: Practical Skills

	Excellent	Developing Needed
Works independently, safely and accurately	Minor support required	Frequent support required

Rubrics can be added to:

- Teams Assignments
- Feedback forms
- Assessment documents

This reduces repetitive typing.

EVIDENCE THROUGH PHOTOS

Construction, Engineering and Motor Vehicle departments should use photographs where possible.

Feedback can reference:

- Finished product
- Process
- Safe working practices
- Tool usage

Example: "Photographic evidence clearly demonstrates safe use of equipment and supports achievement of P3."

This strengthens evidence for quality assurance and external verification.

Better feedback doesn't have to take longer — it just needs the right tools.

Work smarter. Support learners. Stay consistent.
