EFFECTIVE FEEDBACK FRAMEWORK

AI & DIGITAL TOOLS THAT SUPPORT EFFECTIVE FEEDBACK

COPILOT
Generate clear, criteria-linked feedback

AGENTS
Use agents to auto-link criteria and save time

VOICE-TO-TEXT
Capture feedback quickly and accurately

TEAMS ASSIGNMENTS
Provide feedback in one central, secure place

> Effective feedback is not about writing more. It is about clearly identifying what has been achieved, linking it to criteria, and providing one clear next step.
>
> *AI tools such as Copilot, Agents, Voice-to-Text and Teams Assignments help us do this more consistently, more efficiently and with greater impact on learner progress.*

WHY?

- ✔ Meeting quality assurance requirements
- ✔ Reducing workload through effective use of AI and digital tools

BENEFITS

- ✔ Consistent, high-quality feedback
- ✔ Clearer next steps for learners
- ✔ Stronger learner progress and outcomes

QUICK FEEDBACK FORMULA

A simple sentence structure:

What went well + **Which criteria has been met** + **What needs to happen next**

EXAMPLE:

> You completed the wheel alignment accurately and followed health and safety procedures throughout. This meets P4 and P5. To work towards Merit criteria, explain how incorrect alignment affects vehicle performance and tyre wear.

SUGGESTED DEPARTMENT STANDARD

Every feedback comment should answer four questions:

1. What did the learner do well?
2. Which criteria has been met?
3. What needs improving?
4. What is the next action?

If all four are present, feedback is usually robust enough for quality assurance purposes.

THE 3C FEEDBACK MODEL

1 COMMEND

Start with what the learner has done well.

Examples:

- ✔ "You demonstrated safe use of the hydraulic lift throughout the task."
- ✔ "Your measurements were accurate and within tolerance."
- ✔ "You correctly identified the fault diagnosis procedure."

This keeps feedback positive and motivating.

2 CRITERIA

Link directly to the unit criteria or learning outcome. *(this can be done using a pre created feedback form, or agent in which it auto links to criteria)*

Examples:

- ✔ "Evidence meets **P3** because you successfully completed a brake inspection using the correct process."
- ✔ "Evidence partially meets **M1** because analysis is present but justification is limited."

This is the piece that is often missing and is essential for quality assurance.

ASK TUTORS:
Can the learner see exactly which criterion they have met?
If the answer is no, the feedback needs strengthening.

3 CHALLENGE

Provide clear developmental actions.

Examples:

- ✔ "To strengthen your evidence against **M1**, explain why you selected this diagnostic method over alternative approaches."
- ✔ "To improve future work, include photographs of each stage with annotations."

This gives learners a clear next step.

FEEDBACK EXPECTATIONS FOR QUALITY ASSURERANCE

Feedback should always be:

SPECIFIC	CRITERIA LINKED	DEVELOPMENTAL	ACTIONABLE
Focus on what the learner actually did.	Link feedback directly to criteria or learning outcomes.	Help learners understand how to improve.	Learners should know exactly what to do next.
✖ Not: "Good work"	✖ Not: "Pass achieved"	✖ Not: "Needs more detail"	✖ Not: "Try harder next time"
✔ Instead: "You correctly completed the engine strip-down and recorded measurements accurately."	✔ Instead: "Your evidence demonstrates P2 because you safely completed the maintenance task following manufacturer guidance."	✔ Instead: "Add an explanation of why the fault occurred" to demonstrate understanding."	✔ Instead: "To improve, include step-by-step photographs with labels and explain the purpose of each step."

CLEAR FEEDBACK.
CONFIDENT LEARNERS. BETTER OUTCOMES.

Consistency in feedback drives excellence in learning.

Your feedback makes the difference.
