# USING AI TO SUPPORT FEEDBACK

## A Practical and Ethical Guide for Teachers

### APPROPRIATE USES

**AI may be used to:**

- Improve wording and clarity.
- Summarise teacher observations.
- Generate draft feedback.
- Suggest next steps.
- Align feedback to criteria.
- Identify patterns across a class.
- Make feedback more accessible.
- Create differentiated feedback.

**NOTE:** The teacher reviews everything before sharing.

### INAPPROPRIATE USES

**Do not use AI to:**

- Grade work without teacher review.
- Make final assessment decisions.
- Generate feedback without reviewing the learner's work.
- Provide pastoral or safeguarding decisions.
- Predict learner capability or future success.
- Label learners.
- Create feedback that has not been checked by a teacher.

**NOTE:** Create feedback that has not been checked by a teacher.

### WHY USE AI FOR FEEDBACK?

**AI can help teachers:**

- Save time on routine feedback tasks.
- Improve consistency of feedback.
- Rewrite feedback in a clearer or more supportive tone.
- Link feedback to assessment criteria.
- Generate targets and next steps.
- Identify common themes across a class.
- Create verbal and written feedback summaries.

AI should **support** teacher expertise, not replace it.

### THE GOLDEN RULE

**"The teacher remains responsible for all feedback given to learners."**

Always review, edit and approve AI-generated feedback before sharing it with students.

### DATA PROTECTION AND PRIVACY

**Before using AI:**

**DO**

- Remove sensitive personal information where possible.
- Follow organisational policies for approved AI tools.
- Use institution-approved accounts. (MS 365 Copilot)
- Check outputs for accuracy.
- Verify any references or facts.

**DO NOT**

- Upload confidential information to unapproved systems.
- Include safeguarding records.
- Include medical information.
- Include unnecessary personal data.
- Share identifiable learner information with public AI tools.

### COMMON AI ERRORS TO WATCH FOR

**1. HALLUCINATIONS**

AI may invent:

- Assessment criteria
- References
- Facts
- Learner achievements

Always verify accuracy.

**2. OVERLY POSITIVE FEEDBACK**

AI often generates praise that is too generic.

**Example:**

- "Excellent work throughout."

**Better:**

- "You accurately explained the four stages of the recruitment process and supported your points with relevant examples."

**3. MISSING CONTEXT**

AI only knows what you provide.

**Poor prompt:**

- "Give feedback on this work."

**Better prompt:**

"Using the attached Level 2 criteria, provide constructive feedback, highlighting strengths, areas for development and one SMART target."

### BEST PRACTICE WORKFLOW

1. Review learner work yourself.
2. Record notes or verbal feedback.
3. Use AI to organise or improve feedback.
4. Check against:
   - Criteria
   - Learning objectives
   - Professional judgement
5. Personalise where required.
6. Share with learner.

### AI FEEDBACK CHECKLIST FOR TEACHERS

Before sharing feedback ask:

- ☐ Is it accurate?
- ☐ Is it aligned to the assessment criteria?
- ☐ Is it specific to the learner?
- ☐ Does it identify strengths?
- ☐ Does it identify improvements?
- ☐ Does it provide a clear next step?
- ☐ Have I checked all AI-generated content?
- ☐ Would I be comfortable explaining this feedback to the learner?

If the answer is "yes" to all questions, the feedback is likely suitable to use.

### KEY MESSAGE FOR STAFF

AI can help us produce feedback more efficiently, consistently and accessibly. However, **professional judgement, subject expertise** and **knowledge of the learner** remain essential. AI should **enhance** high-quality feedback, not replace it.

This would work well as a 2–3 page handout alongside your Copilot demonstration showing how to create written feedback, convert verbal feedback from transcripts, and align comments to assessment criteria.

**USE AI RESPONSIBLY. REVIEW CRITICALLY. SUPPORT LEARNERS.**

*Better feedback. Better learning.*
